Serial No. 09/582,779 POMPEJUS et al.

COPY OF ALL CLAIMS

- An orotidine-5'-phosphate decarboxylase gene having the sequence SEQ ID NO: 1 or its homologs isolated from microorganisms which have at least 80% homology with the sequence SEQ ID NO: 1.
- An orotidine-5'-phosphate decarboxylase gene having the sequence SEQ ID NO: 1 2. or its homologs are isolated from Ashbya gossypii.
- An amino-acid sequence encoded by a gene or its homologs as claimed in claim 1. 3.
- An amino-acid sequence as claimed in claim 3, which comprises an enzymatically 4. active protein.
- A gene construct comprising an orotidine-5'-phosphate decarboxylase gene having 5. the sequence SEQ ID No: 1 or its homologs as claimed in claim 1, where the gene or its homologs is functionally linked to one or more regulatory signals.
- A gene construct as claimed in claim 5, whose gene expression is increased by the 6. regulatory signals.
- A vector comprising a gene construct as claimed in claim 5. 7.
- A microorganism comprising at least one gene construct as claimed in claim 5. 8.
- A process for producing uracil-auxotrophic microorganisms, which comprises 9. modifying an orotidine-5'-phosphate decarboxylase gene having the sequence SEQ ID NO: 1 or its homologs as claimed in claim 1 in such a way that the protein encoded by the gene is inactive, and introducing this modified gene into the microorganisms and integrating said gene by homologous recombination into the

- pompedus et al. Serial No. 09/582,779
 genome of the organisms, and subsequently selecting these microorganisms for resistance to 5-fluoroorotic acid.
- 10. A process for inserting DNA into microorganisms, which comprises inserting a vector which comprises an intact orotidine-5'-phosphate decarboxylase gene having the sequence SEQ ID NO: 1 or its homologs isolated from microorganisms which have at least 80% homology with the sequence SEQ ID NO: 1 as claimed in claim 1 together with at least one other nucleic acid sequence, into a microorganism which is deficient in orotidine-5'-phosphate decarboxylase nucleic acid sequence having the sequence SEQ ID NO: 1 or its homologs as claimed in claim 1 together with at least one other nucleic acid sequence, into a microorganism which is deficient in orotidine-5'-phosphate decarboxylase nucleic acid sequences, and cultivating this microorganism on or in a culture medium without uracil.
- 11. A process as claimed in claim 10, wherein a linear DNA is used as vector.
- 12. A process as claimed in claim 10, wherein an Ashbya gossypii strain is used as microorganism deficient in orotidine-5'-phosphate decarboxylase genes.
- 13. A process as claimed in claim 10, wherein at least one gene of riboflavin synthesis is inserted as additional gene into the microorganism.
- 14. A process for selecting cells, said process comprising the step of transforming cells with a gene sequence or its homologs as claimed in claim 1.
- 15. The process as claimed in claim 14 for Ashbya gossypii.
